Patients who are at high risk for obstructive sleep apnea (OSA) AND receive IV sedating medications intra-operative/intra-procedure (EXCLUDING case start sedating medications), or during Phase II recovery should be, at the discretion of the anesthesia provider, transferred to a higher level of monitoring to PACU.

Procedure Date: __________________ Procedure: ________________________________________________

Admitting Diagnosis: _____________________________________________________________________________________________

1. ALLERGIES: □ NKDA □ Allergic to: ________________________________________________________________

2. IF REGIONAL BLOCK PERFORMED BY ANESTHESIA: LOWER EXTREMITY NON-WEIGHT BEARING, UP WITH CRUTCHES ONLY; IF UPPER EXTREMITY BLOCK MUST USE SLING 24 HRS FOR SINGLE INJECTION AND IF CATHETER LEFT IN PLACE THEN MUST USE SLING UNTIL CATHETER IS REMOVED.

   □ Weight in Kilograms __________
   □ Routine Vital Signs Notify MD for:______________________________________________________________
   □ Point of Care Glucose: Notify physician for glucose less than __________ or greater than __________
   □ Use standard order set for Insulin Sliding Scale

   SPECIAL CONSIDERATION: Phase II (OPS)-Continuous Pulse Oximetry is mandatory for all patients with the following criteria: ASA Score of III or greater, prone positioning, obese patients and patients with a positive High Risk OSA Score.

   □ Continuous Pulse Oximeter
   □ O₂ Saturation of less than ________ % Notify Anesthesiologist on call or ______________________________________
   □ If unable to wean off O₂ after two 15 min Room Air Trials, notify the Attending Anesthesiologist and Attending Surgeon.

3. IV:

   □ Continuous intravenous fluids □ Lactated Ringers □ Normal Saline □ Other: ____________________________
   □ To run at __________________ milliliters/hour
   □ Discontinue intravenous fluid and catheter @ ________________________________________________

4. MEDICATIONS: See Admission Medication Reconciliation Form. Use Surgeon preference for post-operative pain management

   Adult:
   □ Ondansetron (Zofran) 4 milligrams intravenous as needed for nausea/vomiting one time only
   □ __________________________________________________________________________________________

   Pediatric:
   □ __________________________________________________________________________________________
   □ __________________________________________________________________________________________

5. DISCHARGE:

   □ Modified Post Anesthesia Recovery Score (MPAR) is 18 or above, per Department of Anesthesia Protocol.
   □ Requires Anesthesiology Attending evaluation prior to discharge.
   □ Discharge education for Regional Anesthesia to patient at time of discharge (use the online education form under “depart, custom tab”).
   □ Discharge phone call: specifically inquire about regional block and document patient report of numbness, pain, weakness, bruising.
